

SOLR: PEAK PERFORMANCE

MARK.MILLER @
LUCIDIMAGINATION.COM

The Agenda

- ☼ Quick Solr Background
- ☼ Performance Factors
- ☼ Performance Monitoring
- ☼ Benchmarking
- ☼ Quotes and Pictures!

☀️ **A wise man can see more from the bottom of a well than a fool can from a mountain top . (Unknown)**

☀ **Wise:** having the power of discerning and judging properly as to what is true or right; possessing discernment, judgment, or discretion.

☀ **Wise:** possessed of or characterized by scholarly knowledge or learning; learned;

☼ **Who Knows Solr? Lucene?**

☼ **Who Knows of the Committers?**

☼ **Read the User lists**

☼ **Read Lucene in Action**

☼ **Read the Solr Wiki**

☼ **Read the free Lucid Solr Ref Guide**

☼ **Read the Solr books**

☀ “The capacity of human beings to bore one another seems to be vastly greater than that of any other animal.”

[H. L. Mencken](#)

US editor (1880 - 1956)

☼ Que non boring inspirational image:

☀ Inspiration

- ☀ a. Stimulation of the mind or emotions to a high level of feeling or activity.
- ☀ b. The condition of being so stimulated.

Yes - believe it or not, you where all just inspired.

“When monitoring or debugging performance, things are often not as they first appear.”

- Me?? Now?

Performance Factors

☀ "Give a man a fish and you feed him for a day; teach him how to fish... and you've opened up a whole 'nother can of worms." -Warm Southern Breeze

We are here to crack open a can of something.

?

wa -> iowait: Amount of time the CPU has been waiting for I/O to complete.

☼ The FileSystem Cache

☀ Field Caches - uninverting the index. The index goes from term -> doc - now we want doc -> term!

☀ Sorting, faceting, many fields, oh my.
Lucene 3 and before...

Non Locale String FieldCache uses two arrays

[Dog,Horse,Lion,Zebra] [0,2,1,3,2,1,1,1,3,3,2,1,4,2,1,2]

4 unique terms

16 documents

Things are changing...shared prefix, packed ints, byte arrays, oh my again.

☼ Solr Caches

☼ Query Result Cache, Document Cache, Filter Cache

CACHE	
name:	queryResultCache
class:	org.apache.solr.search.LRUCache
version:	1.0
description:	LRU Cache(maxSize=512, initialSize=512)
stats:	lookups : 26463 hits : 26462 hitratio : 0.99 inserts : 2 evictions : 0 size : 2 warmupTime : 0 cumulative_lookups : 26463 cumulative_hits : 26462 cumulative_hitratio : 0.99 cumulative_inserts : 1 cumulative_evictions : 0

✻ JVM Settings, Garbage Collection

<http://www.lucidimagination.com/Community/Hear-from-the-Experts/Articles/Scaling-Lucene-and-Solr>

<http://www.lucidimagination.com/blog/2011/03/27/garbage-collection-bootcamp-1-0/>

☀ Performance Monitoring

[Drink] provokes the desire, but it takes away the performance.

William Shakespeare (1564 - 1616), *Macbeth*, Act II, sc. 3

“Bullshit!”

☼ What the \$#!#\$\$%@ is happening to my Field Caches!?

✻ A lot of times, getting the best performance first means figuring out what is not performing. There are a lot of moving parts here!

JConsole's Cooler Older Brother

The screenshot shows the VisualVM 1.2 application window. The title bar reads "VisualVM 1.2". The menu bar includes "File", "Applications", "View", "Tools", "Window", and "Help". Below the menu bar is a toolbar with several icons. On the left, there is a tree view under "Applications" with the following structure:

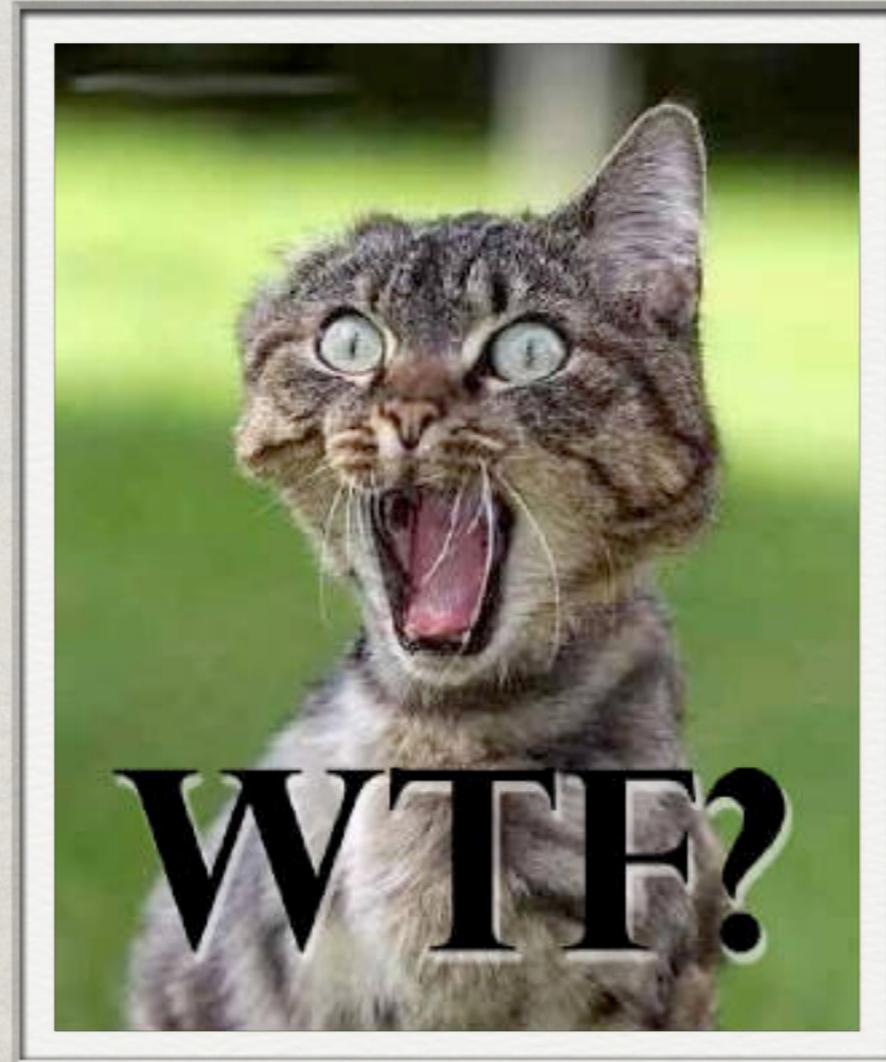

- Local
 - VisualVM
 - Java2Demo.jar (pid 7958)
- Remote
 - remote.host1.com
 - Remote Application 1
 - remote.host2.com
 - Remote Application 2
- VM CoreDumps
- Snapshots

The main area of the window displays a "Start Page" with a table of links. The table is titled "VisualVM 1.2" and contains the following links:

VisualVM Home	Java SE Reference at a Glance
Getting Started with VisualVM	Troubleshooting Guide for Java SE 6
VisualVM Troubleshooting Guide	Troubleshooting Java™ 2 SE 5.0
Getting Started Extending VisualVM	Monitoring and Managing Java SE 6

At the bottom of the window, there is a checkbox labeled "Show On Startup" which is checked.

☀ Developer Tools! WTF!?

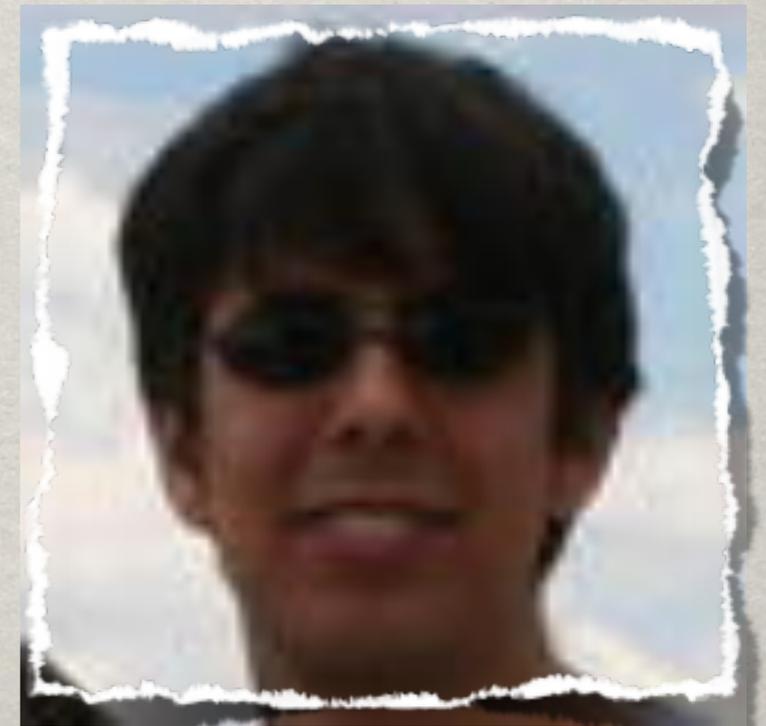

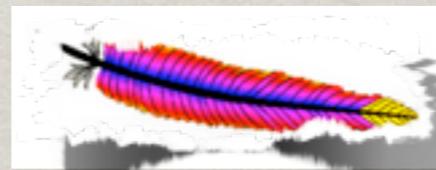

“For germans showers in the US are simply too complicated.”

- Uwe Schindler

☼ VisualVM is easy! Solr Users should be able to use it too!! German Solr Users too!!

At worst, do a little inspection, deepen your knowledge, and *then* come to the Solr user mailing list with what you have found.

- ✻ Which part of the query is slow?
- ✻ Get the time taken in each component for a request.
- ✻ Add debug=timing to your query parameters.

- ✻ A perf hunting anecdote - what are some of the generic steps to tracking down perf issues?
- ✻ Is there disk activity? How is the heap? Timing of various Solr components? What does the Profiler say? Put it all together. Or take your evidence to the Solr User list.

Benchmarking

My 2nd attempt at benchmarking how long I could forget my coffee before meltdown. It did not smell nice.

- ✻ Lucene has some nice standard benchmarking tools that many of the developers use.

The benchmark contrib/module.

Python scripts that drive the benchmark module in an Apache Extra's project.

- ✻ Solr developers have taken a much more ad-hoc approach thus far.

☀ What's common?

☀ Custom One Off or Couple Off Benchmark Code

0.2

☼ SolrMeter: <http://code.google.com/p/solrmeter/>

The screenshot displays the SolrMeter application window with a menu bar (File, Edit) and three main control panels:

- Query Console:** Shows metrics like Total Queries (0), Total Query Time (0), Average Query Time (0), Total Client Time (0), Average Client Time (0), Test Started At, Total Errors (0), and Queries per Minute (20). It includes Start and Stop buttons.
- Update Console:** Shows metrics like Perform Commits (false), Num of Docs Before Commit (100), Max time before commit (10,000), Not committed Docs (0), Last Commit (-), Number of Commits (0), Added Documents, Test Started At, Total errors on update, Total errors on commit, and Updates per Minute (20). It includes Start and Stop buttons.
- Optimize Console:** Shows metrics like Optimizing Now (false), Optimize Count (0), Last Optimize Time (0), Total Optimize Time (0), Optimization Time Average (0), Last optimization result (-), and Total Optimization Errors (0). It includes an Optimize Now button.

Below the panels is a navigation bar with tabs: Histogram (selected), Pie Chart, Query Time history, Operation Time Line, Query Statistics, Error Log, and Query Panel.

The **Histogram** chart shows the Number of Queries on the y-axis (ranging from 0.00 to 1.00) and Time on the x-axis. The chart area is currently empty.

☼ A new Solr benchmarking option

☼ Written by me, for you, as part of prep for this talk!! Your \$\$\$ got you some code!

☼ But it's not complete, or yet committed...there are a few things to be worked out...

☼ But you can start playing with it now if you are adventurous!

☼ How to easily generate documents for Solr indexing benchmarks?

☼ Tactic? First, like many times before, like many others before, started ripping code from Lucene benchmark contrib.

- ✻ The benchmark module is already generic.
- ✻ It already has an expressive algorithm language.
- ✻ It already has great document generation and query source code.
- ✻ Many developers have added lots to it over the years.
- ✻ It just doesn't work with Solr (yet).

BENCHMARK DOCS?

http://lucene.apache.org/java/3_0_2/api/contrib-benchmark/index.html

For newer versions, now that benchmark is a module rather than contrib, you might have to look around a bit.

I've done some work to address this.

Starting with...

☀ New Benchmark Tasks:

☀ SolrAddDocTask

☀ SolrClearIndexTask

☀ SolrCommitTask

☀ StartSolrServerTask

☀ StopSolrServerTask

log.step=5000

docs.file=/Users/markrmiller/wikidumps/enwiki.out.txt

content.source=org.apache.lucene.benchmark.byTask.feeds.LineDocSource

solr.server=org.apache.solr.client.solrj.impl.StreamingUpdateSolrServer

#solr.server=org.apache.solr.client.solrj.impl.CommonsHttpSolrServer

solr.url=http://192.168.1.200:8983/solr

solr.field.mappings=doctitle>title,docid>id,docname>text,docdate>text,docdatenum>text,doctimesecnum>text,body>text

solr.streaming.server.queue.size=10

solr.streaming.server.threadcount=5

query.maker=org.apache.lucene.benchmark.byTask.feeds.ReutersQueryMaker

task at this depth or less would print when they start

task.max.depth.log=2

log.queries=false

#

Easy to vary settings per round:

```
solr.server=solrserver_impl:org.apache.solr.client.solrj.im  
pl.StreamingUpdateSolrServer:solr.server=org.apache.solr.cl  
ient.solrj.impl.CommonsHttpSolrServer
```

#

{ "Rounds"

 SolrClearIndex
 ResetSystemErase

 ["Populate"
 { "MAddDocs" SolrAddDoc > : 20000
 { BlockSolrServerTillFinish >
 } : 3
] : 3

 SolrCommit

 NewRound

} : 4

RepSumByName

BUILD SUCCESSFUL

Total time: 18 minutes 43 seconds

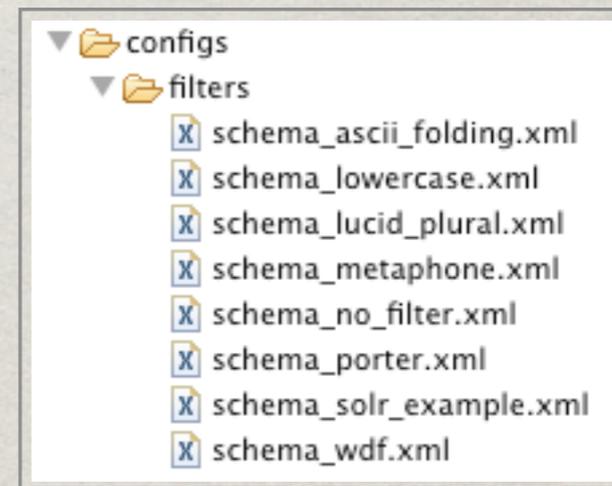

✻ What other cool things?

✻ Local or Remote - local allows starting a new JVM during the algorithm run - remote lets you hit any remote or locally running Solr instance.

✻ Select Solr config files per round.

☀ Select config per round allows you to easily setup a wide variety of configurations for testing - add in a little version control and now you are cooking with fire.

```
solr.configs.home=/configs/filters
```

```
solr.schema=schema:schema_ascii_folding.xml:schema_lowercase.xml:schema_metaphone.xml
```

APACHE
LUCENE
EUROCON
